SUMMARY

Software engineer who builds and deploys backend systems in Java, Spring Boot and Go, with hands-on work in applied machine learning and low-level systems. Built and deployed JachAI, a tests-and-certificates platform backed by 733 Java tests. Computer science student at Southeast University, Dhaka, seeking an internship or junior backend role.

TECHNICAL SKILLS

Languages: Java, Go, C, C++, Python, SQL, HTML, CSS
Backend: Spring Boot, Spring Security, REST APIs, JUnit, Maven
Databases: MongoDB, MySQL, SQLite, Redis
DevOps and Tools: Docker, Git, GitHub, Render, Vercel, IntelliJ IDEA, VS Code
AI and ML: YOLOv8, computer vision, transformer attention
Systems: OpenGL, sockets and networking, operating systems, embedded systems, assembly

PROJECTS

JachAI: Tests and Certificates Platform

Java 21, Spring Boot, MongoDB, Redis, Docker | jachai.nazmulhsn.me

- Built a platform for schools, training centres and hiring teams in which the server owns the exam clock, scores and records.
- Added AI-drafted questions that require human approval before use, frozen test versions on publish, and certificates anyone can verify with a public code.
- Covered the system with 733 Java tests and 176 browser checks; deployed live with Docker; English and Bangla interface.

The Chocomuse: Store Management System

Java 17, JavaFX, MySQL, Maven | github.com/Nazmul142965/The_Chocomuse

- Built admin and customer workflows: inventory, sales and revenue tracking, product catalogue, cart, payments by cash, credit or debit card, and order history.
- Organised 12 JavaFX screens into controller, service, interface and model layers, with MySQL schema and sample-data scripts.

CampusCollab: Campus Collaboration Platform

Java, Spring Boot, REST, Tailwind CSS | github.com/Nazmul142965/CampusCollab

- Built a Spring Boot API and web interface with role-based sign-in for students, faculty and admins.
- Delivered six modules (skill swap, events, faculty rating, projects, chat, careers) with a project report and flowchart.

Brain Tumor MRI Classification

Python, YOLOv8 | github.com/Nazmul142965/Brain-Tumor-MRI-Classification-YOLOv8

- Trained YOLOv8-Nano to classify MRI scans into four classes, reaching 98.5% validation accuracy with 1.4M parameters.
- Wrote data-split, training and single-image prediction scripts.

Employee Management System

Java, Spring Boot, Spring Security, MongoDB, Docker | github.com/Nazmul142965/employee-management

- Implemented role-based access, admin user management, input validation and caching, packaged as a Docker image.

Night Harbor 3D Simulation

C++, OpenGL | github.com/Nazmul142965/project_harbor

- Built a 3D harbour with day-night lighting, a second viewport and procedurally generated textures, without a game engine.

EDUCATION

Southeast University, Dhaka, Bangladesh | Bachelor's degree in Computer Science (in progress)
Government Science College, Dhaka, Bangladesh | Higher Secondary Certificate (HSC)
Dhaka Cantonment Board Adarsha Bidyaniketon, Dhaka, Bangladesh | Secondary School Certificate (SSC)

ADDITIONAL

Competitive programming: Active on LeetCode, practising data structures and algorithms in Go and C. Also built a REST Students API in Go with SQLite.
Research: Authored a LaTeX poster, "The Scaled Dot-Product Attention Algorithm", at Southeast University.
Languages: English, Bangla
